

SUPERBUGS AND ENDOSCOPES

Keep your patients safe. Sterilize your endoscopes with the STERIZONE® VP4 Sterilizer. Stop the spread of infections like CRE, MRSA and C. difficile.

If you know or suspect a scope* has come into contact with a multi-drug-resistant bacteria, sterilize it in the STERIZONE VP4 Sterilizer.

The STERIZONE VP4 Sterilizer is the only validated, terminal, low temperature sterilization system cleared in the US for long, flexible endoscopes like gastroscopes and colonoscopes*.

Read more in the Canadian Journal of Infection Control, Fall 2017** and visit our website, TSO3.com/STERIZONE.

WITH THE STERIZONE VP4 STERILIZER, IT IS EASIER, FASTER AND SAFER TO STERILIZE YOUR SCOPES.*

They can be sterilized:

- In your facility
- In less than 1 hour***
- Without long aeration times or exposure to toxic chemicals

* See claims for more details. TSO3.com/STERIZONE

** Dufresne, S. et al., A new method to sterilize flexible multichannel colonoscopes. Can. J. Inf. Control (2017) 32:165-171.

*** Cycle times may vary based on load conditions.

Some flexible endoscopes may contain specific materials or components that may not be compatible with the STERIZONE VP4 process. Please contact the endoscope manufacturer to confirm compatibility of the specific endoscope model with the STERIZONE VP4 process. Repeated use and reprocessing of endoscopes and accessories leads to gradual wear and tear. Before each patient procedure, inspect the endoscope and accessories for damage, according to the original endoscope manufacturer's instructions.
