

SUPERBUGS AND ENDOSCOPES

Keep your patients safe. Sterilize your endoscopes with the STERIZONE® VP4 Sterilizer. Stop the spread of infections like CRE, MRSA and C. difficile.

If you know or suspect a scope* has come into contact with a multi-drug-resistant bacteria, sterilize it in the STERIZONE VP4 Sterilizer.

The STERIZONE VP4 Sterilizer is the only validated, terminal, low temperature sterilization system cleared in the US for long, complex, flexible multi-channel endoscopes that fall within certain dimensions, like gastroscopes, colonoscopes and duodenoscopes.*

Read more in the American Journal of Infection Control, 2018** and visit our website, [TSO3.com/STERIZONE](https://www.tso3.com/STERIZONE).

WITH THE STERIZONE VP4 STERILIZER, IT IS EASIER, FASTER AND SAFER TO STERILIZE YOUR SCOPES.*

They can be sterilized:

- In your facility
- In a cycle with time less than 1 hour***
- Without long aeration times or exposure to toxic chemicals

* See claims for more details. [TSO3.com/STERIZONE](https://www.tso3.com/STERIZONE)

** Molloy-Simard, V. et al., Elevating the stand of endoscope processing: Terminal sterilization of duodenoscopes using a hydrogen peroxide-ozone sterilizer. Am J. Inf. Control (2018) in press.

*** Cycle times may vary based on load conditions.

Some flexible endoscopes may contain specific materials or components that may not be compatible with the STERIZONE VP4 Sterilizer process. Please contact the endoscope manufacturer to confirm compatibility of the specific endoscope model with the STERIZONE VP4 Sterilizer process. Repeated use and reprocessing of endoscopes and accessories leads to gradual wear and tear. Before each patient procedure, inspect the endoscope and accessories for damage, according to the original endoscope manufacturer's instructions.
